SUMMARY

B.Tech CSE (Data Science) student, CGPA 9.56/10, who builds and deploys AI-powered tools: a GenAI RAG web app, automated analytics for 2,000+ users, and a cloud-native CI/CD pipeline.

EDUCATION

SRM Institute of Science and Technology, Kattankulathur, Tamil Nadu
B.Tech Computer Science & Engineering (Data Science) | CGPA: 9.56/10 | Aug 2023 - Jun 2027

Presidium School, Sector 57, Gurugram
Class XII (CBSE): 78.6% | 2023
Class X (CBSE): 86.8% | 2021

EXPERIENCE

Data Science Intern, EasyUCEED | Jun 2026 - Aug 2026
- Built a personalized analytics tool serving 2,000+ monthly users, turning UCEED scores and topic-level strengths and weaknesses into clear insights per student.
- Automated exam review for 100% of student submissions, replacing manual review with individualized performance breakdowns.
- Developed a roadmap engine (an automated workflow) that converts student weaknesses into prioritized, topic-level study plans.

Volunteer, We Care Foundation, Gurugram | Jun 2024 - Aug 2024
- Mentored underprivileged students through educational support and community outreach initiatives.

PROJECTS

DocuSENSE: GenAI Document Q&A Web App | Python, FAISS, BM25, Streamlit, RAG | Jan 2026 - Mar 2026
- Built a GenAI-powered document Q&A web app (Streamlit) supporting 5 file formats, using semantic chunking and Reciprocal Rank Fusion for better retrieval.
- Combined FAISS vector search, BM25 keyword matching and CrossEncoder reranking, improving answer relevance by 35% over single-retrieval baselines.
- Integrated the Groq LLaMA 3.3 70B LLM for real-time Q&A, NLP-driven summarization and sentiment analysis; optimized token usage to stay within API rate limits.

Cloud-Native CI/CD Pipeline on AWS EKS | AWS, Docker, Kubernetes, Jenkins | Sep 2025 - Dec 2025
- Automated deployment of a Flask web application using Jenkins, Docker and GitHub Webhooks in an end-to-end CI/CD pipeline.
- Deployed the application on AWS EKS with Kubernetes Deployments, Services and Horizontal Pod Autoscaling so it scales with load.
- Set up Prometheus and Grafana to monitor application health and cluster performance.

Customer Churn Prediction using Ensemble Learning | Python, Machine Learning | May 2025 - Aug 2025
- Built an ensemble churn model (Random Forest and Gradient Boosted Trees) on a 10K+ customer dataset, reaching a 91% F1-score.
- Ran EDA and statistical significance testing on 15+ features, handling missing values and outliers, then applied feature engineering, scaling and encoding.
- Tuned hyperparameters with GridSearchCV and cross-validation, cutting false negatives by 22% and producing business-facing recommendations.

TECHNICAL SKILLS

AI / GenAI: RAG, LLMs (Groq LLaMA 3.3 70B), NLP, Information Retrieval, Feature Engineering, Data Preprocessing, Model Evaluation
Programming: Python, SQL, C++
Deployment & DevOps: AWS, Docker, Kubernetes, Jenkins, CI/CD, Streamlit (web app deployment)
Core CS: Data Structures & Algorithms, Object-Oriented Programming, DBMS
Tools: Git, GitHub

ACHIEVEMENTS & CERTIFICATIONS

- Finalist, BITS TechXcelerate Hackathon.
- Represented Gurgaon in the DLF U-13 District Football Tournament.
- NPTEL Certified: Java Programming, Database Management Systems, Introduction to Machine Learning.
- MATLAB Certified: MATLAB Onramp, Image Processing Onramp.
- GitHub Copilot Certification (2026).
